

Introduction to apps

- Kibana consists of *apps*
- The apps are what you see within the menu
- Kibana also contains use case specific *solutions*
 - E.g. for observability and security analysis
 - These require setup of different parts of the Elastic Stack
 - We won't cover those in this course
- Things change; I will do my best to keep everything up to date 😊

Course scope

- We will cover most apps — except those belonging to a solution
 - These require setup of the Elastic Agent, APM agents, web servers, etc.
- We will cover general purpose Kibana features
 - E.g. Dashboards, visualizations, and users
