# Kibana Query Language (KQL)

- Those were the basic — and most important parts — of KQL

- There are a couple of things we didn't cover

  - E.g. querying `nested` fields

- Feel free to explore the documentation (link attached)

# Uses of KQL

- KQL is used throughout Kibana, i.e. in a number of apps

- Can be used to apply filters on dashboards

- Can be used to filter data within visualizations

- You will most likely work with KQL at some point
