About me

- My name is Bo Andersen

- Software developer from Denmark 🇩🇰

  - Backend web developer

  - Transitioned into data analysis

- Mainly worked for online marketing startups

- Besides teaching, I am partner in an online marketing startup

- I use the Elastic Stack on a daily basis

Who are *you*?

- Perhaps you have *some* experience with Kibana

- ... or perhaps you *don't* (that's **totally** fine 🙂)

- This course starts at the beginner's level

- You need to know the **basics** of Elasticsearch

- The course *guides* you through the process of learning Kibana

CodingExplained
CODE. SLEEP. REPEAT.

Scope of the course

- Kibana — not the entire Elastic Stack

- This allows me to go into a lot of detail

- Otherwise I would only be able to cover the basics

- Courses that claim to cover the entire Elastic Stack will just teach you the very basics

- Check out my other courses for other parts of the Elastic Stack 🙂

What will you learn?

- All of the fundamentals of Kibana

  - Visualizations, dashboards, users, roles, spaces, reporting, alerting, ...

- Check the course curriculum for a detailed list

- No specific use case is covered

- This is a general purpose Kibana course
